EclipsePackager2000 is an All-purpose program for splitting and compressing files in popular file formats. Cabinet files are a folder structure of various compression types used to pack files together as a single item that can be unzipped or opened with a data recovery program. Using a cabinet file is the only way to recover files after a disk or other media (hard drive, CD-ROM, floppy disks, etc.) has been formatted. Since Cabinet files are an excellent way to archive and/or backup files for later recovery, EclipsePackager2000 allows you to create and open them.

EclipsePackager2000 has a very user friendly, wizard-based interface and compression. You can also set options to split files in different ways and determine the best compression format for you. EclipsePackager2000 is great to use as a file archiver, a format splitter, as a backup utility or a recovery tool after a disk has been formatted. EclipsePackager2000

Supports the following compression formats: - ZIP - 20-50% comp. - SHR - 5-25% comp. - BZIP2 - 5-25% comp. - CAB - 100% comp.

EclipsePackager2000's unique Green Eclipse Intelligent Packing

Technology, is designed to recopies out of data loss occurred in case the target file is lost (corrupted) during packing. In case this happens, you can select the range of data from the target file, which will be preserved and saved into a new output file. EclipsePackager2000 Features:

What's New in the?

"EclipsePkg" is an utility for splitting and packing files into "Cabinet" format, which is the same file format that IBM, Apple and Microsoft computers use to store the contents of compressed ZIP archives. For example,

"EclipsePkg" will split a file into 4 pieces, 2 lefts and 2 rights, and then pack them into a ZIP archive. "EclipsePkg" can perform 2 different operations on a file. It can either compress a file using a compression algorithm or split a file into smaller parts for easier archiving. It performs the operations by using a compression algorithm or "CAB" algorithm. By using Green Eclipse Intelligent Packing Technology, which ensures minimal damage if data loss does occur, "EclipsePkg" will recover 100% of the data. "EclipsePkg" is the only packed application that will detect the exact location of the parts in the archive and pack them accordingly, and will show the parts of the compressed archive at their exact location as well as reveal the

compressed archive. "EclipsePkg" will automatically create a console window and type out the packed archive contents to the console window. "EclipsePkg" can also save an ASCII file (.ASX) containing the packed archive contents. "EclipsePkg" can create encrypted archives if users do not supply a password. An AES 256 bit encrypted archive will result if a user does not specify an encryption key. "EclipsePkg" will also scramble the packing order of the parts into the archive, so that no recognizable order can be detected if the encrypted archive is opened. With this "feature", "EclipsePkg" is the first packed application that uses a new public key algorithm and "Cipher Block Chaining (CBC)" mode of encryption.

REQUIREMENTS: This program will run on Windows 95, 98, ME, NT, 2000 and XP. The program requires SysEdit 1.2 (and later) for DOS or CMD. Users with 64 MB or more of RAM will appreciate the 32 MB memory footprint.

Users with 8 MB or less of RAM will appreciate the 2 MB memory footprint.

COMPATIBILITIES: "EclipsePkg" can be used with various compression algorithms; the algorithms are listed below. All of the files are "compressed" before they are packed. "E
